

About FASTUI

January 28, 2021

Fast Enterprises develops and delivers software used by agencies to manage a variety of government programs, including unemployment insurance (UI). Our COTS FastUI software provides complete functionality for UI program administration. It can be implemented for either UI Tax or UI Benefits programs, or as a fully integrated solution.

FastUI provides out-of-the-box capabilities for benefits, tax, and appeals administration, as well as virtually all other aspects of UI program administration. It avoids the complexities of integrating a mixture of autonomous applications and instead allows agencies to focus on configuring the software to reflect their unique requirements, regulations, and policies.
