Support and Software Engineer - On Point Job Position

May 03, 2021

Position: Support and Software Engineer

On Point Technology is a private software company employing technology enthusiasts who deliver services and commercially available web-based software products in support of state workforce agencies.

On Point Technology is looking for an experienced Support and Software Engineer, who will provide level-2 technical support to the existing product install base plus product development. The individual should have experience in supporting live products as well as coding for web-based business application architectures using programming languages such as, but not limited to, Java, .Net, Python, JavaScript, HTML, CSS3, etc. The ideal candidate must work effectively in a fast-paced environment, is a self-starter, manages multiple tasks concurrently.

This position reports to the On Point Technology Systems Architecture Manager. As a software engineer working on support and development, you will have the opportunity to work on the latest DevOps and software development technologies. In this position, you will be able to:

- Strong communication skills with both technical and non-technical business groups
- Hands-on ability with both on-premises and cloud-based infrastructure
- Working knowledge and hands-on skills working with AWS cloud-based technologies.
- Strong hands-on ability to code and debug JAVA-based code and applications.
- Strong working knowledge surrounding JavaScript, python, and PHP.
- Strong working knowledge of coding using secure communication protocols.
- Work with software architects and team leads to design and code solutions that meet business needs.
- Cloud-based security concepts and implementations.
- Self-motivated individual that can work with minimal supervision with a keen eye toward customer delivery.

<u>**Required Skills**</u>

Hard skills:

- Working knowledge of a variety of software components, such as MS-SQL, My-SQL, IIS, Docker, Windows, Unix, scripting languages, AWS, etc.
- Well-versed in design patterns and software architecture and knows when to apply what design patterns.
- General understanding of execution environment and computer network.
- 5 years building applications with OOD, MVC, Spring/Spring Boot, jBPM, ESB, rules engine, JMS, Hibernate, JPA, Java, Relational DB, , Linux, Windows Server, Tomcat, SQL Server, MySQL, Shell scripting, Python/Pyspark, and Jenkins • Basic AWS (ECS, ALB, S3, EC2)

- Experience in Agile environment and delivering software iteratively throughout the project lifecycle.
- Experience working with cross-functional teams (QA, business analysts, subject domain experts, and project managers)
- Experience in migrating software to a different platform.
- Experience in estimating development work.

Soft skills:

- Strong communication skills internally and externally
- Strong ability to break assignments down into smaller tasks and estimate efforts.
- Ability to work to design solutions based on customer constraints and guidelines.
- Ability to articulate design to a non-technical audience.
- Ability to prioritize tasks.
- Ability to conduct research into new technologies.
- Ability to learn and apply new technologies.

Desired

AWS Cloud Practitioner certified
