Google Cloud - Human Services and Labor

February 12, 2022

Never before was there such a need for modern and accessible tools to allow a workforce to secure new jobs and operate remotely. The Virtual Career Center (VCC), built on Google Cloud, was designed with these needs in mind.

Google Workspace, including Google Meet, allows job seekers to schedule video meetings with career coaches, job recruiters, and potential employers. The Google Job Search API will enable them to explore career opportunities best suited to their skills and interests.

A thousand miles away, the Rhode Island Virtual Career Center was helping its job seekers by offering virtual meetings with career coaches, the ability to schedule meetings with prospective employers, and help on building effective resumes. Skipper, the CareerCompass RI Bot, an intelligent agent for careers, uses data and machine learning to facilitate potential new career paths and reskilling opportunities for Rhode Islanders.
