## Use of LADT data for State funding

The LADT data are a known data set that if produced correctly can provide valuable information to state UI stakeholders. As one contemporary example, for the funding opportunity UIPL 23-21 Grant Opportunity for Promoting Equitable Access to Unemployment Compensation (UC) Programs, a state could use locality and wage data as part of their analysis, identification and strategic development when developing their Special Budget Request (SBR) application.

Using measurable and specific data, like those data in the LADT, may allow a state to better execute a plan to address barriers to access and equity issues both by allowing for better initial evaluation of objective data, as well as interim evaluation of program/plan success using those same data as the project
